## SUMMARY

Full-stack software engineer with 4+ years of experience designing, building and shipping production web applications end to end, from database design and APIs to fast, accessible front ends. As founder of Corvian Labs I build multi-tenant SaaS, booking platforms, AI help assistants and e-commerce for clients across Ontario and the US. I treat accessibility (WCAG 2.1 AA), performance, security and maintainability as defaults, backed by automated tests.

## TECHNICAL SKILLS

**Languages:** TypeScript, JavaScript, SQL, Swift, HTML5, CSS3/Sass

**Front end:** React 19, Next.js (App Router), Tailwind CSS, React Hook Form + Zod, Redux, Zustand, Radix UI, TanStack Table, three.js/WebGL

**Back end & data:** Node.js, Express, REST APIs, PostgreSQL, Prisma, MongoDB, MySQL, WebSockets, Redis (Upstash), Supabase, Inngest background jobs, multi-tenant data design

**Auth & payments:** Better Auth, NextAuth.js, Clerk, role-based access control, JWT, Stripe subscriptions

**AI:** Anthropic Claude API, OpenAI API (GPT-4o, vision, DALL·E 3), on-device Apple Foundation Models, content-grounded help assistants, AI-assisted development (Claude Code)

**Cloud & DevOps:** Vercel, AWS (S3, SMS, SNS), Cloudflare Workers, Sentry, Resend, Git/GitHub

**Testing & quality:** Vitest, Jest (90%+ coverage), Playwright, axe-core, Lighthouse and Core Web Vitals, WCAG 2.1 AA, technical SEO and structured data

**Mobile:** SwiftUI, SwiftData, WidgetKit, Live Activities, StoreKit, Capacitor (iOS/Android)

## PROFESSIONAL EXPERIENCE

**Corvian Labs** (self-employed), *Founder & Software Engineer* 40 hrs/week | May 2021 – Present

- **Pawlunteer:** building a multi-tenant volunteer-management SaaS for animal shelters (Next.js 16, React 19, TypeScript, PostgreSQL/Prisma, Better Auth, Inngest), launching with a regional SPCA of 400+ volunteers and designed for 1,000+. Covers two-stage applications and screening, shift scheduling with self-serve drops and backfill, tablet clock-in by PIN or QR badge, event-triggered email and SMS, points tracking, reporting, and built-in e-signature for volunteer agreements.
- Kept Pawlunteer's data in Canada (AWS Montréal for files and SMS, Montréal-hosted Postgres) and scoped every tenant-owned table to its organization, with automated cross-tenant leak tests, a full Content-Security-Policy and audit logging.
- **Leap Into Lessons:** architected and deployed a production booking platform for a swim school (Next.js 14, TypeScript, MongoDB Atlas) with 20+ API endpoints, 9 database models, role-based authentication (NextAuth.js/JWT), real-time availability with concurrency-safe cart holds, and a multi-function admin dashboard, replacing a WordPress site and a spreadsheet.
- Built its email infrastructure (Resend), rate limiting on sensitive endpoints, caching for external API calls, and secure password resets with time-limited tokens.
- **Website help assistants:** built an embeddable AI help chat (Claude API behind a Cloudflare Worker) for an animal charity's Webflow site and for corvianlabs.com. It answers only from the organization's own content, keeps the API key server-side, and has FAQ, hours and contact tabs, an always-visible emergency strip, and keyboard and screen-reader support.
- **Salt & Spirit Skin Rituals:** reworked an Ohio skin care brand's BigCommerce store: concern-based categories, ritual and gift sets, search-focused product copy, and accessibility fixes.
- Designed and built **corvianlabs.com** (Next.js 16, React 19, Tailwind CSS v4, three.js hero with a no-GPU fallback): Lighthouse desktop performance 99, accessibility and SEO 100, 0 axe violations.
- **ThawMail:** designed and launched an AI lead-generation SaaS (Next.js, Express, MongoDB): OpenAI GPT-4o vision on Puppeteer screenshots of prospects' sites to write outreach emails, Clerk authentication, Stripe subscriptions, Sentry monitoring, and Capacitor builds for iOS and Android.
- **Pensate:** built and published an AI journaling app on the Apple App Store (Swift, SwiftUI, SwiftData) with on-device AI through Apple's Foundation Models, home-screen widgets, Live Activities and StoreKit in-app purchases.

**Ontario Animal Welfare Network**, *Software Engineer (Contractor)* 40 hrs/week | Feb 2025 – Mar 2025

- Built a React/TypeScript website to WCAG 2.1 Level AA, auditing ARIA labelling, keyboard navigation and screen-reader compatibility.
- Applied structured data and technical SEO, improving organic search visibility by 30%.

**Allied Universal**, *Human Resource Coordinator & Scheduler* 40 hrs/week | Jun 2023 – Jan 2024

- Coordinated scheduling for 400+ employees across multiple enterprise systems, resolving coverage conflicts and achieving 97% client satisfaction.
- Streamlined data extraction and reporting across platforms to produce accurate monthly billing reports for leadership.

**Allied Universal**, *Senior Supervisor Team Lead* 40 hrs/week | Jan 2020 – Jun 2023

- Diagnosed and resolved badge access control, alarm system and hardware/software integration issues across multiple facility systems.
- Created and managed JIRA tickets for cross-departmental issue tracking, with reproducible escalation workflows that cut issue closure time by about 25%.

## TECHNICAL PROJECTS

**cpaskewitz.com** | Portfolio with a WebGL hologram Nov 2026

- React and Vite site with a three.js 2.5D hologram built from a depth map, loaded only after idle on hardware WebGL with a CSS fallback; a command palette, skill-filtered projects, reduced-motion support and 0 axe violations.

**BoguStore** | Full-Stack E-Commerce Platform Sep 2024

- Built a Next.js e-commerce store with Redux state management, using code splitting to cut subsequent page load times by about 20%.
- Wrote Jest unit and integration suites with 90% code coverage, contributing to a ~25% reduction in production bugs.

## EDUCATION

**BrainStation** | Diploma, Software Engineering Completed April 2024

Intensive full-stack program; built a production-grade application with React, Node.js, Express and MySQL across a complete SDLC.
